

Success Story 20. Rapid Soil Health Testing Kit

The kit has been designed for on-farm testing by a semi-skilled person for several soil physical parameters, important soil chemical, fertility and biological tests. About 40-50 samples can be performed with one filling. The ease in operation and portability to far flung areas/villages coupled with the kit requiring no electricity/power to operate will be immensely beneficial to the small, marginal, poor farmers and other stake holders. A farmer can generate his own soil health card and soil health assessment and apply the required nutrients accordingly.

Recommended Soils: The kit is useful for neutral, saline and sodic soils of India or any soil having plain, flat or lowland topography/ Landforms. More than 25000 testing kits distributed along with soil health cards for the benefit of farmers
