

# DRR Dhan 78 (IET 30240)

## High Yielding Low Phosphorous Tolerant Variety

DRR Dhan 78 developed from the cross Swarna / MTU 1001 is a long duration low soil phosphorous tolerant variety with medium slender grains with acceptable quality traits and high HRR (67.5%)

|                  |   |                                                                                              |
|------------------|---|----------------------------------------------------------------------------------------------|
| Ecology          | : | Irrigated Low Phosphorus conditions                                                          |
| Grain Type       | : | Medium Slender                                                                               |
| Duration         | : | 140-145 days                                                                                 |
| Yield            | : | 5.5 t/ha                                                                                     |
| Salient features | : | Moderately resistant to Leaf blast (LB), Neck blast (NB), Sheath rot, BLB, Gall midge & WBPH |
